# CREATE YOUR OWN EXPERIENCE

# Info Screens

Dynamic content screens powered by live data. Enable a content type below to add it to your Media Library — then add it to any playlist like normal content.

## How It Works

Info Screens are ready-made content widgets you can drop into any playlist. Pick a widget below, turn it on or fill in the settings, and it automatically appears in your **Media Library** as a content item — just like an image or video.

- Pick a widget** — Click any card below to open it.
- Enable or create** — Some widgets (Weather, News, Clock) have a single on/off toggle. Others (QR Codes, Polls, Countdowns) let you create multiple screens.
- Add to a playlist** — Once enabled, find the new content item in your **Media Library** and drag it into any playlist. Your players will start showing it automatically.

## Info Screens

Dynamic content screens powered by live data. Enable a content type below to add it to your Media Library — then add it to any playlist like normal content.

[← Back to Info Screens](#)

**Traffic / Drive Times** [+ New Traffic Screen](#)

Live travel times with traffic conditions via TomTom. Set your origin and up to 8 destinations per location.

## Info Screens

Dynamic content screens powered by live data. Enable a content type below to add it to your Media Library — then add it to any playlist like normal content.

[← Back to Info Screens](#)

**News** [Enable](#)

Live news headlines from RSS feeds. Choose from SA and international sources with 3 display styles.

[Disabled](#)

## Info Screens

Dynamic content screens powered by live data. Enable a content type below to add it to your Media Library — then add it to any playlist like normal content.

[← Back to Info Screens](#)

**Weather** [Enable](#)

Shows current conditions and a 3-day forecast. Each player automatically displays weather for its own location — so a screen in Cape Town shows Cape Town weather, while one in Johannesburg shows Johannesburg.

[Disabled](#)

### Setting up locations

Weather uses each player's assigned location to show the right forecast. If a player has no location, it falls back to a default view. To set up locations:

1. Go to **Locations** and add your branch locations (e.g. "Cape Town Office", "Durban Hotel Lobby") with their addresses.
2. Go to **Players**, open a player's Screen Details, and pick the location it's installed at.
3. That's it — the weather widget will automatically show the correct forecast for each player.

A toolbar for content creation featuring a red border and a white background. The top half has a grey and white checkerboard pattern. Below it, there are eight icons with labels: Size (a square with corner handles), AI (a four-pointed star), BG (a square with a mountain range), Shapes (a triangle, a heart, and a square), Icons (a musical note and a percentage sign), Images (a square with a mountain range), Text (the letters 'Tt'), and Layers (a stack of three squares).
